Intelligent Computing

Proceedings of the 2026 Computing Conference, Volume 3

This book presents a selected collection of high-quality papers presented at Computing Conference 2026, held in London, UK, on 9–10 July 2026. The conference witnessed submissions from researchers, academicians, and industry practitioners from worldwide. To ensure the high standards of originality, technical quality, and relevance to the conference themes, all the papers were passed through a double-blind peer-review process.
A wide range of core computer science tracks, including AI and machine learning, data science, computing for society, cybersecurity, privacy and trust, computer vision, technology-enhanced education, future computing architectures, and intelligent systems, encompass the current research and emerging trends. Together, these works highlight innovative methodologies, theoretical advancements, and practical applications that advance the state-of-the-art in computing and digital technologies.
The authors trust that this volume of the proceedings will serve as a valuable reference for researchers and practitioners and contribute to continued exploration, collaboration, and innovation in the rapidly evolving field of computing.
