Volchenkov / Xing / Huang

Nonlinear Complex Systems II

Attractors, Solitons, and Waves

This book presents recent developments in dynamical systems theory and its cross-disciplinary applications. It connects mathematical theory with practical problem-solving in fields ranging from social dynamics to oceanography. Topics include nonlinear phenomena, chaos theory, fractional calculus, and delayed systems, with applications in social systems, energy optimization, wave dynamics, neuroscience, and astronomy. The collection provides analytical and numerical approaches for understanding complex system behaviors, demonstrating how dynamical systems frameworks reveal patterns across diverse phenomena and offer powerful tools for scientists and engineers addressing real-world problems.

vorbestellbar, Erscheinungstermin ca. Februar 2027

Artikelnummer: 9783032265036
Medium: Buch
ISBN: 978-3-032-26503-6
Verlag: Springer Nature Switzerland AG
Erscheinungstermin: 24.02.2027
Sprache(n): Englisch
Auflage: Erscheinungsjahr 2027
Serie: Nonlinear Systems and Complexity
Produktform: Gebunden
Seiten: 313
Format (B x H): 155 x 235 mm
