

Global Sustainability

The Impact of Local Cultures. A New Perspective for Science and Engineering, Economics and Politics

This first book to focus on cultural diversity as a key element of sustainable development in the context of science and engineering provides cross-disciplinary information and assistance in understanding our world in transition. As such, it furnishes the global scientific community and decision makers in governmental and non-governmental institutions as well as in industry with much-needed information on how the various factors affecting sustainable development -- including culture -- depend on and interfere with each other. Featuring a contribution by the President of the Club of Rome, HRH Prince El Hassan bin Talal, this is vital reading for all (natural) scientists, engineers, economists, ecologists, environmental organizations, and consultants.
