

Semantics of Data Types

International Symposium Sophia-Antipolis, France, June 27-29, 1984. Proceedings

A kernel language for abstract data types and modules.- A semantics of multiple inheritance.- Understanding Russell a first attempt.- A basic Abstract Semantic Algebra.- Using information systems to solve recursive domain equations effectively.- The semantics of second order polymorphic lambda calculus.- Polymorphism is not set-theoretic.- A theory of data type representation independence.- Abstract data types and their extensions within a constructive logic.- Deriving structural induction in LCF.- Executable specification of static semantics.- Cartesian closed categories of enumerations for effective type structures.- Type inference and type containment.- F-semantics for intersection type discipline.- The typechecking of programs with implicit type structure.- Partial implementations of abstract data types: A dissenting view on errors.- Building specifications in an arbitrary institution.- A proof system for verifying composability of abstract implementations.- Towards a proof theory of parameterized specifications.

Artikelnummer: 9783540133469
Medium: Buch
ISBN: 978-3-540-13346-9
Verlag: Springer
Erscheinungstermin: 01.06.1984
Sprache(n): Englisch
Auflage: 1. Auflage 1984
Serie: Lecture Notes in Computer Science
Produktform: Kartoniert
Gewicht: 1250 g
Seiten: 396
Format (B x H): 155 x 235 mm
