

Advanced Concepts for Intelligent Vision Systems

7th International Conference, ACIVS 2005, Antwerp, Belgium, September 2005, Proceedings

This volume collects the papers accepted for presentation at the 7th International Conference on Advanced Concepts for Intelligent Vision Systems (ACIVS 2005). The ACIVS conference was established in 1999 in Baden-Baden (Germany) as part of a large multiconference. ACIVS has maintained the tradition of its first edition of having 25-minute oral talks in a single track event, even though the number of participants has been steadily growing every year. The conference currently attracts computer scientists from more than 20 countries, mostly from Europe, Australia and Japan, but also from USA, Asia and the Middle East. Though ACIVS is a conference on all areas in image processing, one of its major domains is image and video compression. A third of the selected papers dealt with compression, motion estimation, moving object detection and other video applications. This year, topics related to clustering, pattern recognition and biometrics constituted another third of the conference. The last third was more related to the fundamentals of image processing, namely noise reduction, filtering, restoration and image segmentation. We would like to thank the invited speakers Fernando Pereira, Marc Op de Beeck and Rafael Molina for enhancing the technical program with their presentations.
