Collecting Spatial Data

Optimum Design of Experiments for Random Fields

The book is concerned with the statistical theory for locating spatial sensors. It bridges the gap between spatial statistics and optimum design theory. After introductions to those two fields the topics of exploratory designs and designs for spatial trend and variogram estimation are treated. Special attention is devoted to describing new methodologies to cope with the problem of correlated observations.

Book bridges the gap between spatial statistics and optimum design theory New edition includes new relevant research and references Includes supplementary material: [sn.pub/extras](#)
