

Architecture of Computing Systems - ARCS 2006

19th International Conference, Frankfurt/Main, Germany, March 13-16, 2006,
Proceedings

Technological progress is one of the driving forces behind the dramatic development of computer system architectures over the past three decades. Even though it is quite clear that this development cannot only be measured by the maximum number of components on a chip, Moore's Law may be and is often taken as a simple measure for the non-braked growth of computational power over the years. The more components are realizable on a chip, the more innovative and unconventional ideas can be realized by system architects. As a result, research in computer system architectures is more exciting than ever before. This book covers the trends that shape the field of computer system architectures. The fundamental trade-off in the design of computing systems is between flexibility, performance, power consumption, and chip area. The full exploitation of future silicon capacity requires new architecture approaches and new design paradigms such as multiple computers on a single chip, reconfigurable processor arrays, extensible processor architectures, and embedded memory technologies. For a successful use in practical applications, it is not enough to solve the hardware problems but also to develop platforms that provide software infrastructure and support effective programming. A quantum jump in complexity is achieved by embedded computing systems with an unprecedented level of connectivity linking together a growing number of physical devices through networks. Embedded systems will become more and more pervasive as the component technologies become smaller, faster, and cheaper. Their complexity arises not only from the large number of components but also from a lack of determinism and a continual evolution of these systems.

Artikelnummer: 9783540327653

Medium: Buch

ISBN: 978-3-540-32765-3

Verlag: Springer

Erscheinungstermin: 06.03.2006

Sprache(n): Englisch

Auflage: 1. Auflage 2006

Serie: Theoretical Computer Science and General Issues

Produktform: Kartoniert

Gewicht: 1590 g

Seiten: 500

Format (B x H): 155 x 235 mm
