Data Science and Classification

Data Science and Classification provides new methodological developments in data analysis and classification. The broad and comprehensive coverage includes the measurement of similarity and dissimilarity, methods for classification and clustering, network and graph analyses, analysis of symbolic data, and web mining. Beyond structural and theoretical results, the book offers application advice for a variety of problems, in medicine, microarray analysis, social network structures, and music.

Weareespeciallygratefultothereferees–listed at the end of this book – who reviewed the submitted papers. Their careful reviews helped us greatly in selecting the papers included in this volume.
