

## Reliable Software Technologies -- Ada-Europe 2003

The 8th International Conference on Reliable Software Technologies, Ada-Europe 2003, took place in Toulouse, France, June 18–20, 2003. It was sponsored by Ada-Europe, the European federation of national Ada societies, and Ada-France, in cooperation with ACM SIGAda. It was organized by members of Adalog, CS, UPS/IRIT and ONERA. Toulouse was certainly a very appropriate place for this conference. As the heart of the European aeronautic and space industry, it is a place where software development leaves no place for failure. In the end, reliability is a matter of human skills. But these skills build upon methods, tools, components and controlled practices. By exposing the latest advances in these areas, the conference contributed to fulfilling the needs of a very demanding industry. As in past years, the conference comprised a three-day technical program, during which the papers contained in these proceedings were presented, along with vendor presentations. The technical program was bracketed by two tutorial days, when attendees had the opportunity to catch up on a variety of topics related to the field, at both introductory and advanced levels. On Friday, a workshop on "Quality of Service in Component-Based Software Engineering" was held. Further, the conference was accompanied by an exhibition where vendors presented their reliability-related products.
