

## Innovative Internet Computing Systems

International Workshop IICS 2001 Ilmenau, Germany, June 21-22, 2001 Proceedings

Nowadays, the Internet is the most commonly used medium for the exchange of data in different forms. Presently, over 60 million machines have access to the Internet and to its resources. However, the Internet is also the largest distributed system offering different computational services and possibilities not only for cluster computing. If the needs of modern mobile computing and multimedia systems are taken into account, it becomes clear that modern methods must ensure an effective development and management of the Internet allowing each user fast access to this huge resource space. The Innovative Internet Computing Systems workshop is organized by the Gesellschaft für Informatik (GI) in Germany. It intends to be an open meeting point for scientists dealing with different aspects of this complex topic. In contrast to the Distributed Communities on the Web workshops, which can be considered as the roots of IICS, special attention is given to fundamental - search works and the application of theoretical and formal results in practical implementations.
