

Geometry and Robotics

Workshop, Toulouse, France, May 26-28, 1988. Proceedings

Effective semialgebraic geometry.- Curves and computer algebra.- Placement of polygons.- The algorithm by schwartz, sharir and collins on the piano mover's problem.- A practical exact motion planning algorithm for polygonal objects amidst polygonal obstacles.- Motion planning for manipulators in complex environments.- Planning collision free trajectories by a configuration space approach.- Trajectory planning and motion control for mobile robots.- Motion planning for a mobile robot with a kinematic constraint.- Motion from point matches: multiplicity of solutions.- Singular configurations of parallel manipulators and grassmann geometry.- Applications of geometric homology.- Some examples of algorithms analysis in computational geometry by means of mathematical morphological techniques.- An optimal algorithm for the boundary of a cell in a union of rays.- Triangulation in 2D and 3D space.- Hamiltonian cycles in delaunay complexes.- Models of robot manipulators.- Modelling positioning uncertainties.- Contact manipulation and geometric reasoning.- Geometric reasoning in motion planning.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9783540516835
Medium: Buch
ISBN: 978-3-540-51683-5
Verlag: Springer
Erscheinungstermin: 11.10.1989
Sprache(n): Englisch
Auflage: Erscheinungsjahr 1989
Serie: Lecture Notes in Computer Science
Produktform: Kartoniert
Gewicht: 707 g
Seiten: 415
Format (B x H): 168 x 240 mm
