

Algebraic and Logic Programming

Second International Conference, Nancy, France, October 1-3, 1990. Proceedings

Proving and rewriting.- Proving correctness w.r.t. specifications with hidden parts.- Hybrid implementations of algebraic specifications.- Multi-modal logic programming using equational and order-sorted logic.- Logic programs with equational type specifications.- Higher-order order-sorted algebras.- Axiomatization of a functional logic language.- Fourier algorithm revisited.- Fixpoint techniques for non-monotone maps.- Domain theory for nonmonotonic functions.- On the strong completion of logic programs.- An equivalence preserving first order unfold/fold transformation system.- Propositional calculus problems in CHIP.- Unfolding and fixpoint semantics of concurrent constraint logic programs.- Eliminating negation from normal logic programs.- On logic programming interpretations of Dislog: Programming long-distance dependencies in logic.- Recursive query processing in predicate-goal graph.- Implementation of completion by transition rules + control: ORME.- A matching process modulo a theory of categorical products.- Equation solving in conditional AC-theories.- Lazy narrowing in a graph machine.- An abstract concurrent machine for rewriting.- Applying term rewriting methods to finite groups.- Termination proofs by multiset path orderings imply primitive recursive derivation lengths.- Optimization of rewriting and complexity of rewriting.- AC-Termination of rewrite systems: A modified Knuth-Bendix ordering.

Proving and rewriting.- Proving correctness w.r.t. specifications with hidden parts.- Hybrid implementations of algebraic specifications.- Multi-modal logic programming using equational and order-sorted logic.- Logic programs with equational type specifications.- Higher-order order-sorted algebras.- Axiomatization of a functional logic language.- Fourier algorithm revisited.- Fixpoint techniques for non-monotone maps.- Domain theory for nonmonotonic functions.- On the strong completion of logic programs.- An equivalence preserving first order unfold/fold transformation system.- Propositional calculus problems in CHIP.- Unfolding and fixpoint semantics of concurrent constraint logic programs.- Eliminating negation from normal logic programs.- On logic programming interpretations of Dislog: Programming long-distance dependencies in logic.- Recursive query processing in predicate-goal graph.- Implementation of completion by transition rules + control: ORME.- A matching process modulo a theory of categorical products.- Equation solving in conditional AC-theories.- Lazy narrowing in a graph machine.- An abstract concurrent machine for rewriting.- Applying term rewriting methods to finite groups.- Termination proofs by multiset path orderings imply primitive recursive derivation lengths.- Optimization of rewriting and complexity of rewriting.- AC-Termination of rewrite systems: A modified Knuth-Bendix ordering.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9783540531623

Medium: Buch

ISBN: 978-3-540-53162-3

Verlag: Springer

Erscheinungstermin: 20.09.1990

Sprache(n): Englisch

Auflage: Erscheinungsjahr 1990

Serie: Lecture Notes in Computer Science

Produktform: Kartoniert

Gewicht: 1230 g

Seiten: 389

Format (B x H): 155 x 235 mm
