

Coordination Languages and Models

Second International Conference, COORDINATION'97, Berlin, Germany, September 1-3, 1997, Proceedings

This book constitutes the refereed proceedings of the Second International Conference on Coordination Models and Languages, COORDINATION '97, held in Berlin, Germany, in September 1997.

The 22 revised full papers and 6 posters presented in the book were carefully reviewed and selected from a total of 69 submissions. Also included are three invited papers. The papers are devoted to an emerging class of languages and models, which have been variously termed coordination languages, configuration languages, and architectural description languages. These formalisms provide a clean separation between software components and their interaction in the overall software organization, which is particularly important for large-scale applications and open systems.
