DNA Computing

New Computing Paradigms

This is the first book on DNA computing, a molecular approach that may revolutionize computing-replacing silicon with carbon and microchips with DNA molecules. The book starts with an introduction to DNA computing, exploring the power of complementarity, the basics of biochemistry, and language and computation theory. It then brings the reader to the most advanced theories develop thus far in this emerging research area.

Introduction: DNA Computing in a Nutshell.- I: Background and Motivation.- 1 DNA: Its Structure and Processing.- 2 Beginnings of Molecular Computing.- II: Mathematical Theory.- 3 Introduction to Formal Language Theory.- 4 Sticker Systems.- 5 Watson-Crick Automata.- 6 Insertion-Deletion Systems.- 7 Splicing Systems.- 8 Universality by Finite H Systems.- 9 Splicing Circular Strings.- 10 Distributed H Systems.- 11 Splicing Revisited.

Artikelnummer: 9783540641964
Medium: Buch
ISBN: 978-3-540-64196-4
Verlag: Springer
Erscheinungstermin: 15.09.1998
Sprache(n): Englisch
Auflage: 1998
Serie: Texts in Theoretical Computer Science. An EATCS Series
Produktform: Gebunden
Gewicht: 1680 g
Seiten: 400
Format (B x H): 160 x 241 mm
