

Post-Synthesis Modification I

Molecular Sieves- Science and Technology will cover, in a comprehensive manner, the science and technology of zeolites and all related microporous and mesoporous materials. Authored by renowned experts, the contributions will be grouped together topically in such a way that each volume of the book series will be dealing with a specific sub-field. Volume 3 deals with the most widely employed techniques for the post-synthesis modification of molecular sieves. Among the topics covered in considerable detail are ion exchange, both in the more conventional variant in aqueous suspension and in the solid-state variant, the various methods for dealumination of zeolites, and the techniques for introducing metallic, ionic, oxidic and sulfidic clusters into the cages and channels of microporous materials.

Artikelnummer: 9783540643340

Medium: Buch

ISBN: 978-3-540-64334-0

Verlag: Springer

Erscheinungstermin: 11.01.2002

Sprache(n): Englisch

Auflage: 2002

Serie: Molecular Sieves

Produktform: Gebunden

Gewicht: 852 g

Seiten: 442

Format (B x H): 160 x 241 mm
