

Materials for High Temperature Engineering Applications

This concise survey describes the requirements on materials operating in high-temperature environments and the processes that increase the temperature capability of metals, ceramics, and composites. The major part deals with the applicable materials and their specific properties, with one entire chapter devoted to coatings. Written for engineering and science students, researchers, and managers in industry.

materials specialists who require an easily accessible review of materials outside their specialisation. References are included to allow the reader to re search any material system in greaterdepth.
