

Fluid Dynamics of Packed Columns

Principles of the Fluid Dynamic Design of Columns for Gas/Liquid and Liquid/Liquid Systems

The first German edition of the book "Fluid dynamics of packed columns with modern random and structured packings for gas/liquid systems" was published in 1991. It sold out within a few years. Added to this were numerous enquiries, in particular within the industry, prompting me to publish a second, extended edition. A packed column remains the core element of any diffusional separation process. This underlines the need for basic design principles for packed columns, which enhance the design process by making it more accurate and reliable. The SBD (suspended bed of droplets) model introduced in the first German edition of the book was well received by the experts and is now used by a large number of companies in the industry, as it offers improved reliability in the fluid dynamic design of packed columns. For the purpose of facilitating the design process, the SBD model was integrated into the simulation programme ChemCAD. The software programme FDPACK, which is available for Windows, has certainly contributed to the widespread use of the SBD model. The programme is very user-friendly and the calculation results are presented in tabular as well as graphic form, showing food load, pressure drop and hold-up diagrams in the entire operating range.

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9783540887805

Medium: Buch

ISBN: 978-3-540-88780-5

Verlag: Springer

Erscheinungstermin: 21.12.2009

Sprache(n): Englisch

Auflage: 2010

Serie: Chemische Technik /
Verfahrenstechnik

Produktform: Gebunden

Gewicht: 804 g

Seiten: 355

Format (B x H): 160 x 241 mm
