

Security and Cryptography for Networks

7th International Conference, SCN 2010, Amalfi, Italy, September 13-15, 2010, Proceedings

The 7th Conference on Security and Cryptography for Networks (SCN 2010) was held in Amalfi, Italy, during September 13-15, 2010. This biennial conference has traditionally been held in Amalfi, with the exception of the 7th edition which was held in nearby Maiori. This year the conference received the financial support of the Department of "Informatica ed Applicazioni" and of the Faculty of Science of the University of Salerno, Italy. The wide availability of computer networks, and in particular of the global Internet, offers the opportunity to perform electronically and in a distributed way a wide range of transactions. Hence, cryptography and security assume an increasingly important role in computer networks, both as critical enablers of new functionalities as well as warrantors of the mechanisms' soundness and safety. The principal aim of SCN as a conference is to bring together researchers in the above fields, with the goal of fostering cooperation and exchange of ideas in the stunning Amalfi Coast setting. The conference received 94 submissions—a record-high number for the SCN conference series—in a broad range of cryptography and security areas, out of which 27 were accepted for publication in these proceedings on the basis of quality, originality, and relevance to the conference's scope. At least three Program Committee (PC) members—out of 27 world-renowned experts in the conference's various areas of interest—reviewed each submitted paper, while submissions authored by a PC member were subjected to the more stringent evaluation of five PC members.
