

Applying Soft Computing in Defining Spatial Relations

Geometric properties and relations play central roles in the description and processing of spatial data. The properties and relations studied by mathematicians usually have precise definitions, but verbal descriptions often involve imprecisely defined concepts such as elongatedness or proximity. The methods used in soft computing provide a framework for formulating and manipulating such concepts. This volume contains eight papers on the soft definition and manipulation of spatial relations and gives a comprehensive summary on the subject.

Artikelnummer: 9783662002940

Medium: Buch

ISBN: 978-3-662-00294-0

Verlag: Springer

Erscheinungstermin: 08.08.2012

Sprache(n): Englisch

Auflage: Softcover Nachdruck of the original 1. Auflage 2002

Serie: Studies in Fuzziness and Soft Computing

Produktform: Kartoniert

Gewicht: 341 g

Seiten: 205

Format (B x H): 155 x 235 mm
