Storm

The AI Revolution

Unlocking Tomorrow's World Today

Artificial intelligence has evolved from specialized tools to comprehensive, goal-oriented systems that can learn, adapt, and soon even reason. New models that can write code, produce art, forecast market movements, and support decisions in all spheres of society are being developed every week. But this book covers more than just technology. Power exists. Ethics are a factor. It has to do with intelligence, the nature of future work, and people in general. It is up to the pioneers, leaders, and curious thinkers who must now lead us through the most disruptive time in our history. Dr. Jörg Storm is an international keynote speaker, podcast host, and lecturer at several academic institutions. He holds a Ph.D. in Economics and is recognized for turning technological complexity into crisp, board-level decisions and measurable business outcomes.
