Essentials for the Everyday Use of Interior Architects and Designers

This book provides essential introductory information for designers and interior designers. From the realm of interior design, for example, it deals with ceilings, floors, doors, windows, stairs, etc. – from that of material science, with carpets, wallpaper, wall paint, glass, wood materials, stone, and concrete. It also presents architectural drawing: techniques of representation, descriptive geometry, technical drawing, standard dimensions, signs and symbols, and mathematical foundations; attention is also given to the fundamentals of graphic design, preparing documents for publication, file formats, and color systems. All of this is generously leavened with practical examples; original essays by Ruedi Baur, Axel Kufus, Norbert Rademacher, Martin Kunz, and others; and thought-provoking quotations. If they want to, readers may separate the pages of the Japanese binding – this way they get room to add their personal notes and comments.
