

Discrete-Time Sliding Mode Control for Networked Control System

This book presents novel algorithms for designing Discrete-Time Sliding Mode Controllers (DSMCs) for Networked Control Systems (NCSs) with both types of fractional delays namely deterministic delay and random delay along with different packet loss conditions such as single packet loss and multiple packet loss that occur within the sampling period. Firstly, the switching type and non-switching type algorithms developed for the deterministic type fractional delay where the delay is compensated using Thiran's approximation technique. A modified discrete-time sliding surface is proposed to derive the discrete-time sliding mode control algorithms. The algorithm is further extended for the random fractional delay with single packet loss and multiple packet loss situations. The random fractional delay is modelled using Poisson's distribution function and packet loss is modelled by means of Bernoulli's function. The condition for closed loop stability in all above situations are derived using the Lyapunov function. Lastly, the efficacy of the proposed DSMC algorithms are demonstrated by extensive simulations and also experimentally validated on a servo system.

Artikelnummer: 9789811339639
Medium: Buch
ISBN: 978-981-13-3963-9
Verlag: Springer
Erscheinungstermin: 20.12.2018
Sprache(n): Englisch
Auflage: Softcover Nachdruck of the original 1. Auflage 2018
Serie: Studies in Systems, Decision and Control
Produktform: Kartoniert
Gewicht: 295 g
Seiten: 157
Format (B x H): 155 x 235 mm
