

Non-Pushing PCI Techniques

This book provides an in-depth review of non-pushing percutaneous coronary intervention (PCI). With abundant, clear figures, the chapters logically describe retrograde wiring techniques, including the stenting of bifurcation lesions, right coronary artery ostial lesions, and left main trunk (LMT) lesions, and then go on to illustrate Mitsudo's non-pushing PCI techniques. Short columns between chapters offer tips and tricks to help readers gain a better understanding.

Given its scope, this book is not only a valuable resource for by coronary interventionalists dealing with PCI for complex lesions including chronic total occlusion (CTO), but also serves as a practical and informative for cardiologists.
