

Deep Learning and Computer Vision: Models and Biomedical Applications

Volume 2

This book takes a balanced approach between theoretical understanding and real time applications. All topics show how to explore, build, evaluate and optimize deep learning models with computer vision. Deep learning is integrated with computer vision to enhance the performance of image classification with localization, object detection, object recognition, object segmentation, image style transfer, image colorization, image reconstruction, image super-resolution, image synthesis, motion detection, pose estimation, semantic segmentation in biomedical field. Huge number of efficient approaches/applications and models support medical decisions in the fields of cardiology, dermatology, and radiology. The content of book elaborates deep learning models such as convolution neural networks, deep learning, generative adversarial network, long short-term memory networks (LSTM), autoencoder (AE), restricted Boltzmann machine (RBM), self-organizing map (SOM), deep belief network (DBN), etc.

Artikelnummer: 9789819636471

Medium: Buch

ISBN: 978-981-963647-1

Verlag: Springer

Erscheinungstermin: 17.06.2025

Sprache(n): Englisch

Auflage: Erscheinungsjahr 2025

Serie: Algorithms for Intelligent Systems

Produktform: Gebunden

Gewicht: 492 g

Seiten: 198

Format (B x H): 160 x 241 mm
