

Microchimica Acta

Analytical Sciences Based on Micro- and Nanomaterials

Microchimica Acta (MCA) has established itself as a premier forum for truly novel research results in chemical and biochemical analytical sciences based on the use of micro/nano-structured materials. Coverage includes fundamental studies on, practical applications of, and new approaches towards micro-/nanomaterials such as micro- and nano-shaped particles, upconversion particles, quantum dots, micro/nano-wires, molecular frameworks, meso- and nanoporous materials, nano-sized/structured imprints, thin films, hybrid materials, and related nanosized matter. Invited reviews provide a critical assessment of research progress in these fields.
