

Toxicon strives to publish articles that are current and of broad interest and importance to the toxinology research community. Emphasis will be placed upon articles that further the understanding and knowledge of toxinology. Toxicon's "aims and scope" are to publish: - articles containing the results of original research on problems related to toxins derived from animals, plants and microorganisms - papers on novel findings related to the chemical, pharmacological, toxicological, and immunological properties of natural toxins - molecular biological studies of toxins and other genes from poisonous and venomous organisms that advance understanding of the role or function of toxins - clinical observations on poisoning and envenoming where a new therapeutic principle has been proposed or a decidedly superior clinical result has been obtained. - material on the use of toxins as tools in studying biological processes and material on subjects related to venom and antivenom problems. - articles on the translational application of toxins, for example as drugs and insecticides - epidemiological studies on envenoming or poisoning, so long as they highlight a previously unrecognised medical problem or provide insight into the prevention or medical treatment of envenoming or poisoning. Retrospective surveys of hospital records, especially those lacking species identification, will not be considered for publication. Properly designed prospective community-based surveys are strongly encouraged. - articles describing well-known activities of venoms, such as antibacterial, anticancer, and analgesic activities of arachnid venoms, without any attempt to define the mechanism of action or purify the active component, will not be considered for publication in Toxicon. - review articles on problems related to toxinology.
