Cytotechnology

Incorporating Methods in Cell Science International Journal of Cell Culture and Biotechnology

Cytotechnology is an international journal on the latest developments, methods and techniques in cell culture research involving in vitro systems rather than whole organisms, and the applications of that research in human and veterinary medicine, animal cell biotechnology and cell-based bioassays. The exploitation of cell cultures in a biotechnological context is based upon research generated at all levels of academic and industrial input. The aim of Cytotechnology is to centralize information on both the infrastructure of cell technology and the applied use of cell cultures and thus generate a better understanding of the many facets and disciplines needed to develop successful cell culture processes.
