

Systems Research and Behavioral Science

Systems Research and Behavioral Science is a transdisciplinary journal embracing all strands of the systems movement, from general system theory, and cybernetics and systems engineering, to critical systems thinking and behavioural science. Our scope is comprehensive, covering systems approaches in the physical sciences, biology, family therapy, business and management, project management, information systems, community studies, social policy, governance, agriculture and the environment. However, the editors particularly welcome papers with broad transdisciplinary implications not found in journals devoted to a single discipline.
