Physica E: Low-dimensional Systems and Nanostructures

Physica E (Low-dimensional systems and nanostructures) contains papers and invited review articles on the fundamental and applied aspects of physics in low-dimensional electron systems, in semiconductor heterostructures, oxide interfaces, quantum wells and superlattices, quantum wires and dots and emerging phenomena such as two-dimensional, majorana fermion and topological low-dimensional systems. Both theoretical and experimental contributions are invited. Topics suitable for publication in this journal include spin related phenomena, optical and transport properties, many-body effects, integer and fractional quantum Hall effects, single electron effects and devices, and other novel phenomena.
