Perspectives in Plant Ecology, Evolution and Systematics

Aims and Scope Perspectives in Plant Ecology, Evolution and Systematics is a young international journal which provides a platform for reviews and longer research articles in the fields of ecology, evolution and systematics of plants. The journal is supported by the Rübel Foundation, a private trust associated with the Geobotanical Institute of the Swiss Federal Institute of Technology. The foundation looks back on a continuous tradition of publishing for more than 70 years and is widely known and respected for a number of classic publications in European plant ecology and systematics. Perspectives in Plant Ecology, Evolution and Systematics - Focus on the ecology, evolution and systematics of plants - Informed perspectives on themes of current interest and debate - Full length reviews - Essay reviews - Longer research articles - Applied as well as pure science. Audience Plant physiologists, ecologists, systematists, evolutionary biologists, vegetation scientists
