

physica status solidi (b) basic solid state physics

The physica status solidi (pss) journal group is devoted to the thorough peer review and the rapid publication of new and important results in all fields of solid state and materials physics, from basic science to applications and devices. Among the largest and most established international publications, the pss journals publish reviews, letters and original articles, as regular content as well as in special issues and topical sections. physica status solidi (b) – basic solid state physics covers theoretical and experimental investigations of the structural, electronic, optical, magnetic, and thermodynamic properties of solid materials based on quantum solid state physics. Current topics include nanotubes and graphene, 2-d layered materials, strongly correlated systems, superconductivity, multiferroics, topological insulators, and semiconductors for device technology. Methods range from analytic modeling and computational approaches via growth and preparation to characterization with microscopy, diffraction, spectroscopy, magnetization, dielectric and electrical characterization and beyond. physica status solidi (RRL) - Rapid Research Letters, the flagship pss journal, is one of the fastest, double peer-reviewed journals in solid state and materials physics. Average times are 11 days from submission to first editorial decision, and 12 days from acceptance to online publication. physica status solidi (RRL) Rapid Research Letters has a 2022 Impact Factor of 2.8 (Journal Citation Reports (Clarivate Analytics, 2023)), proving the journal's leading position in cutting-edge research publication at record speed. The journal physica status solidi (a) - applications and materials science has a 2022 Impact Factor of 2.0, while physica status solidi (b) - basic solid state physics has a 2022 Impact Factor of 1.6.
