

Metals and Materials International publishes original papers and critical reviews on all aspects of research and technology in materials engineering: physical metallurgy, materials science, and processing of metals and other materials. Coverage emphasizes those aspects of the science of materials that are concerned with the relationships among the processing, structure and properties (mechanical, chemical, electrical, electrochemical, magnetic and optical) of materials. Aspects of processing include the melting, casting, and fabrication with the thermodynamics, kinetics and modeling. - Presents original papers on a range of relevant topics in materials and metals - Coverage focuses on relationships among processing, structure and properties of materials - Addresses aspects of processing including melting, casting and fabrication
