Elsevier

Renewable Energy Focus

Renewable Energy is no longer a niche sector of novel technologies, and we have now implemented renewable energy to a scale where it is expected to provide 50% of global power in the next few decades. This integration has had a significant impact on conventional energy infrastructure, creating a new grand challenge that the energy sector needs to address: - How should energy infrastructure and markets evolve as the grid becomes more decarbonised and decentralised, and as greater digitisation comes to the fore; - And with this challenge in mind, what pathways (and their associated requirements) will enable renewable energy technologies to co-exist with other assets in a rapidly-decarbonising energy system?
