

Sleep and Vigilance

This journal is a unique platform for collecting and disseminating state-of-the art scientific understanding on research in the overlapping fields of basic, translational and clinical sleep medicine. The multidisciplinary journal offers a forum for biomedical and clinical researchers to share their work in research articles, case reports, clinical investigations, review articles and short communications. Coverage includes such topics as measurement of sleep across phylogeny, ontogeny; sleep functions; sleep organization at the molecular, cellular, systems, and behavior levels, molecular/genetic approaches to studying sleep; neural substrates of altered states of consciousness; large-scale computer simulations; 3D modeling and more.
