Water Waves

An interdisciplinary journal

The Journal publishes carefully selected articles covering all aspects of water waves, both theoretical (including rigorous mathematics, mathematical modelling and numerical simulations) and practical (including laboratory and field work, computational techniques and statistical data analysis). The journal is distinguished by a strictly interdisciplinary focus, and all authors are expected to write an introduction explaining the main findings of their article in terms accessible to non-specialists, and placing the results in a broader context. Contributions featuring a combination of different methodologies are especially welcome.
